Project Demonstration
COP4710

Instructions:

Main Goal: To show your app works as advertised.
Groups: All groups
Preparation: Receiving data from the TAs for the following tasks (see
                          below)
Equipment: Your laptop with the app installed (either hosting locally
                          or with a remote host), or lab computer with internet
                          access (requires a remote host)
Member Participation: Must be a member of the group
Duration: 5 to 15 min.
Evaluation: To be evaluated by the TA

Demo:
- Show the current state/instance of the database (preloaded data: users, RSOs, events, comments…)
- New data to be provided by the TA. Open the app (in a web browser) and run
  - Register a new user.
  - The new user logs in.
  - Create a new RSO.
  - New user joins. An existing user leaves RSO
  - Create new (RSO, Private, public) events. Show the code implemented in your platform (e.g., MySQL, Oracle) to enforce the overlapping constraints.
  - An existing user logs on: show events (all public events, private events of the university the user is attending, and events of RSO of which the user is a member).
  - Create/view/modify/delete comments.
- Advanced Features (if required)

Unexpected App problems:
- This is a timed demo, and the TA can't wait for you to fix your app.
- If the demo was not going as expected (i.e., crash, failed constraint enforcement, produced wrong results, etc.):
  - Do you know what happened?
  - What will you do to fix/correct the problems?

- How long would it take?
- Could it be done in time to report the correction in the report?
- If you can answer these questions confidently, the TA will judge whether the problems are serious (cosmetics, out-of-order display, incorrect design, implementation, just a big mess, or no hope) and assign a proper demo grade. In case they think the problems can be located and fixed in a reasonable amount of time (due to typos, version control, problems out of your control, etc.) they could have them slide and allow you to report the fix in your report.
